

PRODUCT MANUAL

“ULTRA PHONIX”

OVERDRIVE

The Ultraphonix Overdrive is designed to re-create the overdrive produced by a Dumble™ Overdrive Special amplifier. Using a sample size of four generations of Overdrive Special amplifiers from 1970-1990 to voice and calibrate the pedal, the Ultraphonix is more than able to provide the D*style overdrive to any clean amp platform and get the quintessential note bloom and harmonic overtones that these iconic amplifiers are known for.

VOLUME

Adjust the output level of the effect.

FILTER

Adjusts the midrange emphasis between approx. 800-1.6K

GAIN

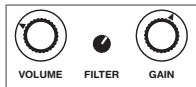

Adjusts the amount of saturation of the signal from boost below 12:00 to overdrive (from 1:00 and beyond).

SUGGESTED SETTINGS

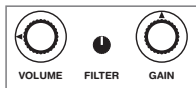

"Robben"

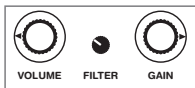

"Mr. 335"

"Lindley"

"Continuum Lead"

"Carlos"

SPECIFICATIONS

Controls	Volume, Tone, Gain
Connections	Input, Output, 9VDC
Dimensions	4.6'x3.2"x1.8"
Power Connector	2.1mm barrel (center negative)
DC Voltage	8.0-9.6V[*9.8V MAX]
Current Consumption	Less than 25mA
