

BATTERY SUPPLY

PRODUCT MANUAL

The Vertex Battery Supply is an isolated 9vDC power supply that allows you to power 4 vintage/vintage-style effects with 9v batteries of your choice, without the head ache of having to open up or unplug your pedals! With the top mounted thumb-screw, you can easily load and unload 4 9vDC batteries to give vintage

effects the liveliness and responsiveness that only occurs when your battery's voltage and current output react to your pick attack. But you won't be sacrificing reliability for tone-your batteries will only be used when powered by the 9vDC in (supply can also function w / o 9vDC in).

Find out why players like Eric Johnson, Scott Henderson, Michael Landau, and Josh Smith (to name a few) prefer the sound and feel of a 9v battery over a traditional 9vDC power supply with the Vertex Battery Supply!

Assembled in California

*Cables not included-requires 2.1 mm barrel standard power cables.

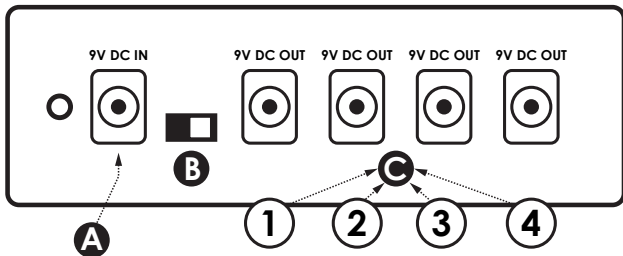

SPECS

Input	9VDC @ 100mA
Outputs	5.5x2.1mm barrel connectors center negative (4) isolated 9VDC battery outputs
Physical:	5.0" x 3.5" x 1.25" 14 oz. (without batteries)

VERTEXEFFECTS.COM

FEATURES

Input from external
9VDC power supply

- A** 9VDC 100ma Input (power with a wallwart or an output on your existing power supply).
- B** The power switch toggles options:
LEFT: Batteries on, only when powered by 9vDC in.
RIGHT: Batteries always on.
*If nothing is plugged into the 9vDC in, LEFT=Global off.
- C** Battery-powered 9vDC out (4).

*We suggest powering only your wah, overdrive, distortion, and fuzz pedals with the BPSU - 9v Carbon batteries will give the best tonal results.
